EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies (ADGIPS)

New Delhi, India

Bachelor of Technology in Computer Science Engineering | CGPA: 9.3 / 10.0

Aug. 2024 – May 2028 (Expected)

AWARDS & ACHIEVEMENTS

Winner, Elastic × Google Cloud Hacknight, Delhi, 2026: Built *Vayu Watch*, a real-time Delhi air quality platform on live DPCC/CPCB data, Gemini-generated personalized health advisories, and Elasticsearch-indexed live history.

National Finalist — Smart India Hackathon 2025: Built *SAHAI*, a full-stack AI mental health platform with real-time WebSocket chat and RAG-based AI therapy (Pinecone + FastAPI), selected from thousands of national teams.

Top 5 in India — NASA Space Apps Challenge 2025 (823 teams): Built *ORBITAIR*, an AI-powered AQI forecasting platform integrating NASA TEMPO, EPA/OpenAQ, and NOAA feeds achieving 98% prediction accuracy.

Top 5 & Rs. 7,000 Prize — Smart Delhi Ideathon 2025: Recognized for civic tech innovation combining backend systems and AI for urban problem-solving.

Winner — Paytm × Nerds Room Hackathon 2025: Built *CommuneOS*, an AI platform matching new community members to mentors and channels via resume upload in under 5 seconds; live-demoed with real personalized dashboards for all 4 teammates.

EXPERIENCE

Cimplifi Tech Solutions LLP

Remote

Data Engineering & Automation Intern

Jun. 2026 – Present

- Designed and maintained ETL pipelines processing large-scale web-scraped datasets for AI-driven analytics workflows.
- Built Selenium-based web automation and scraping scripts, reducing manual data-collection effort by **70%**.
- Automated business-intelligence workflows for lead-generation pipelines, reducing manual reporting overhead.

PROJECTS

Patient Management Service | *Java, Spring Boot, Kafka, gRPC, Docker, PostgreSQL, JUnit*

[GitHub](#)

- Engineered 4 independently deployable microservices using Spring Boot, enabling isolated scaling of billing, auth, analytics, and patient data modules with zero shared state between services.
- Reduced inter-service latency by implementing gRPC for synchronous RPC alongside Apache Kafka for async event streaming, supporting high-throughput real-time data pipelines between services.
- Secured all endpoints with Spring Security, JWT authentication, and RBAC; validated core logic with JUnit & Mockito and containerized the full system via Docker with Maven reproducible builds.

ResumeRank | *Spring Boot, Next.js, FastAPI, Gemini AI, PostgreSQL, JWT, Docker*

[Live](#) | [GitHub](#)

- Developed an AI-powered ATS resume analyzer that compares resumes against job descriptions, producing compatibility scores, keyword matching, and actionable recommendations in seconds.
- Designed a scalable three-service backend (Next.js, Spring Boot, FastAPI) with JWT authentication, modular REST APIs, and Docker-based deployment to support secure and maintainable architecture.
- Leveraged Gemini AI to provide section-wise resume rewriting, skill gap identification, and tailored career insights, significantly improving the quality and relevance of generated recommendations.

Multiverse OS | *Next.js, React, Three.js, WebGL, Zustand, Tailwind CSS, Vercel*

surajdev.indevs.in | [GitHub](#)

- Built a full-stack interactive portfolio as a simulated OS in Next.js and React, featuring a 3D WebGL desktop rendered with Three.js, custom WebGL shaders, and animated scene transitions between worlds.
- Engineered a live CLI terminal with 15+ commands, an ORACLE AI assistant with context-variant responses, and a Recruiter Mode dashboard — global state managed via Zustand with zero prop-drilling.
- Optimized 3D scene performance via lazy loading, texture compression, and progressive Three.js rendering, targeting sub-3s FCP; CI/CD automated deployment to Vercel via GitHub Actions.

SAHAI — Mental Health & Lifestyle Platform | *Django, FastAPI, React, WebSockets, MySQL, Pinecone*

[GitHub](#)

- Architected a full-stack mental health platform with appointment booking, live chat, forums, and AI therapy assistant — designed for 1,000+ concurrent sessions; built RAG microservice with Pinecone for context-aware AI responses.
- Implemented bidirectional WebSocket communication reducing message delivery to under 100ms; designed modular REST APIs across Django and FastAPI for auth, scheduling, forum threading, and professional matching.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript (basic)

Backend & Systems: Spring Boot, Spring Security, Spring Data JPA, Hibernate, FastAPI, Django, REST APIs, Microservices, Apache Kafka, gRPC, WebSockets, Event-Driven Architecture

Databases: PostgreSQL, MySQL, TimescaleDB, Redis, Pinecone (Vector DB), Elasticsearch

Testing & Build: JUnit, Mockito, Maven, Postman, REST API Testing, Selenium

Developer Tools: Docker, Git, GitHub, CI/CD (GitHub Actions), Vercel

Frontend: React.js, Next.js, Three.js, WebGL, Zustand, Tailwind CSS, Leaflet

Certifications: Stanford/Coursera — ML Specialisation (Andrew Ng) | Telusko/Udemy — Java & Spring Boot Development
