EDUCATION

Dr. Akhilesh Das Gupta Institute of Professional Studies (ADGIPS)
Bachelor of Technology in Computer Science Engineering | CGPA: 9.3 / 10.0

Aug 2024 – May 2028 (Expected)
New Delhi, India

AWARDS & ACHIEVEMENTS

- **Winner, Elastic × Google Cloud Hacknight, Delhi, 2026:** Built Vayu Watch, a real-time Delhi air quality & public health platform on live DPCC/CPCB ground station data, Gemini-generated personalized advisories, and Elasticsearch-indexed live history.
- **National Finalist — Smart India Hackathon 2025:** Built SAHAI, a full-stack AI mental health platform with real-time WebSocket chat, RAG-based AI therapy (Pinecone + FastAPI), selected from thousands of national teams.
- **Top 5 in India — NASA Space Apps Challenge 2025 (823 teams):** Built ORBITAIR, an AI-powered AQI forecasting platform integrating NASA TEMPO, EPA/OpenAQ, and NOAA feeds achieving 98% prediction accuracy.
- **Top 5 & ₹7,000 Prize — Smart Delhi Ideathon 2025:** Recognized for civic tech innovation combining backend systems and AI for urban problem-solving.
- **Winner — Paytm x Nerds Room Hackathon 2025** | Built CommuneOS, an AI platform matching new community members to mentors, resources, and channels via resume upload in under 5 seconds; live-demoed with real, personalized dashboards for all 4 teammates.
- **Certifications:** Stanford / Coursera — Machine Learning Specialisation (Andrew Ng) | Supervised, unsupervised & reinforcement learning. Telusko / Udemy — Java & Spring Boot Development.

PROJECTS

Patient Management Service | Java, Spring Boot, Kafka, gRPC, Docker, PostgreSQL, JUnit | <https://github.com/Suraj-codes1410/Patient-management-services>

- Engineered 4 independently deployable microservices using Spring Boot, enabling isolated scaling of billing, auth, analytics, and patient data modules with zero shared state between services.
- Reduced inter-service latency by implementing gRPC for synchronous RPC alongside Apache Kafka for async event streaming, supporting high-throughput real-time data pipelines between services.
- Secured all endpoints with Spring Security, JWT authentication, and RBAC; validated core logic with JUnit & Mockito and containerized the full system via Docker with Maven reproducible builds.

Resume Rank — AI Resume Analysis Platform | Spring Boot, React, Gemini AI, PostgreSQL, JWT, Docker | github.com/Suraj-codes1410/resume-rank
Live : [ResumeRank - Explainable AI Candidate Screening & Scoring](#)

- Developed an AI-powered ATS resume analyzer that compares resumes against job descriptions, producing compatibility scores, keyword matching, and actionable recommendations in seconds.
- Designed a scalable backend with Spring Boot and PostgreSQL, implementing JWT authentication, modular REST APIs, and Docker-based deployment to support secure and maintainable application architecture.
- Leveraged Gemini AI to provide section-wise resume rewriting, skill gap identification, and tailored career insights, significantly improving the quality and relevance of generated recommendations.

Multiverse OS — Immersive Developer Portfolio | Next.js, React, Three.js, WebGL, Zustand, | github.com/Suraj-codes1410/Multiverse-OS
Tailwind CSS

Live: surajdev.indevs.in

- Built a full-stack interactive portfolio as a simulated OS in Next.js and React, featuring a 3D WebGL desktop rendered with Three.js, custom WebGL shaders, and animated scene transitions between worlds.
- Engineered a live CLI terminal with 15+ commands, an ORACLE AI assistant with context-variant responses, and a Recruiter Mode dashboard — global state managed via Zustand with zero prop-drilling.
- Optimized 3D scene performance via lazy loading, texture compression, and progressive Three.js rendering, targeting sub-3s FCP; CI/CD automated deployment to Vercel via GitHub Actions.

EXPERIENCE

Cimplifie Tech Solutions LLP June 2026- Present
Data Engineering & Automation Intern Remote

- Designed and maintained ETL pipelines processing large-scale web-scraped datasets for AI-driven analytics workflows.
- Built Selenium-based web automation and scraping scripts, reducing manual data-collection effort by 70%.
- Automated business-intelligence workflows for lead-generation pipelines, reducing manual reporting overhead.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript (basic)
Backend & Systems: Spring Boot, Spring Security, Spring Data JPA, Hibernate, FastAPI, Django, REST APIs, Microservices, Kafka, gRPC
Databases: PostgreSQL, MySQL, TimescaleDB, Redis, Pinecone (Vector DB), Elasticsearch
Testing & Build: JUnit, Mockito, Maven, Postman, REST API Testing, Selenium
Tools: Docker, Git, GitHub, CI/CD (GitHub Actions), Vercel, React.js, Next.js, Three.js, WebGL, Zustand, Tailwind CSS
